Mechanics (Indian Institute of Technology Kharagpur)

# Detailed Curriculum With Credit and Examination Scheme

F. Y. B. Tech. Semester I and II (Common to All Branches)

From
Academic Year 2020 – 21
(Revision 1)
(Approved by FoET 11 Jan 2020 and AC 02 May 2020)

K J Somaiya College of Engineering, Mumbai-77 (A Constituent College of Somaiya Vidyavihar University)

#### Salient features and changes w.r.t. KJSCE 2018 scheme:

- Promotion to Project based learning
- Electives offered from First Year level itself
- New courses introduced:
  - o Python Programing in Semester II (while retaining Programing in C in Semester I)
  - o Biology for Engineers (as one of the electives)
  - o Engineering Explorations (as one of the electives)
- Wide choice of Exposure Courses for pursuing hobbies music, sports, yoga, literature etc.
- More stress is given on continuous assessment
- One ISE during semester and ESE for selected courses
- Internal assessment component increased to 20% (10% in KJSCE-2018)

#### **Dates of Approval/Amendments:**

- Presented and approved in the 1st FoET meeting of SVU held on 11th Jan 2020
- Presented in the 1<sup>st</sup> AC meeting held on 16 Jan 2020
- Presented by incorporating suggested modifications and approved in the 2<sup>nd</sup> AC meeting held on 02 May 2020
- In effect from Academic Year 2020-21

#### Program Outcomes (PO) – Common to all disciplines

- Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- **PO2.** Problem analysis: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- PO3. Design/development of solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
- **PO6.** The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, cultural, environmental, health, safety and legal issues relevant to the professional engineering practice; understanding the need of sustainable development
- Multidisciplinary Competence: Recognize/study/analyze/provide solutions to real-life problems of multidisciplinary nature from diverse fields
- Ethics: Apply ethical principles and commit to professional ethics, responsibilities, and norms of the engineering practice.
- Individual and teamwork: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
- **PO10.** Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
- PO11. Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
- PO12. Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

<sup>\*</sup> Batch wise Tutorial

#### **Course prerequisites**

- Differentiation Methods
- Basics of Complex numbers
- Basics of Matrices, Inverse and Adjoint of Matrix

#### **Course Objectives**

The objective of the course is to impart knowledge of De-Moivre's theorem, hyperbolic functions and logarithm of complex numbers. The course clarifies the concept of partial differentiation and its applications. The concept of rank of matrix, solving system of linear equations, Eigen values and Eigen vectors is also conveyed.

#### **Course Outcomes**

#### At the end of successful completion of the course the student will be able to

- CO1. Solve problems involving different forms and properties of complex numbers, hyperbolic functions and logarithm of complex numbers.
- CO2. Apply the concept of rank of a matrix and numerical methods to solve system of linear equations.
- CO3. Find Eigen values, Eigen vectors of a matrix, apply Cayley-Hamilton theorem, diagonalise a matrix and find functions of square matrices.
- CO4. Find partial derivatives of multivariable functions, apply the concept of partial differentiation to find maxima and minima of multivariable functions (2-3 variables)
- CO5. Apply Euler's theorem to prove results related to Homogeneous functions.

#### **Course prerequisites**

- Basics of units and conversions Basics of optics, mechanics, electricity and magnetism, thermal properties of conductors and semiconductors, particle properties of radiation
- Basics of differentiation and integration methods, vectors algebra, trigonometry, complex numbers, probability

#### **Course Objectives**

This course delivers the fundamental physical concepts and mathematical foundations of a variety of real-life phenomena in the field of optics, photonics, electromagnetism and technologically useful materials such as semiconductors, dielectrics, optical fibres and liquid crystals. The course covers working principles of different types of sensors and it intends to convey the importance of quantum mechanics to advanced engineering and computing applications.

#### **Course Outcomes**

#### At the end of successful completion of the course the student will be able to

- CO1. Explain a variety of optical phenomena using concepts wave optics and photonics
- CO2. Analyze basic physical properties of technologically important materials
- CO3. Identify the scope of quantum mechanics in engineering and computing applications
- CO4. Solve engineering problems using mathematical foundations of electromagnetism
- CO5. Relate working of different types of sensors with the physics of materials

#### **Course prerequisites**

• Higher secondary level Chemistry

#### **Course Objectives**

The objective of course is to appreciate the basic concepts of chemistry behind the development of futuristic materials and their applications in engineering and technology. The course objective is to understand chemical processes involved in development of sustainable energy sources. To analyze the knowledge of analytical techniques involved in the analysis and characterization of chemical compounds, nanomaterial.

#### **Course Outcomes**

After successful completion of the course, the student will able to-

- CO1. Understand the importance of water in industry and methods to produce soft water and wastewater treatment.
- CO2. Demonstrate and analyze the knowledge of polymeric for futuristic engineering applications.
- CO3. Identify and compare the material best suited for the energy production in sustainable and efficient manner.
- CO4. Apply the knowledge of green chemistry and nanotechnology for solving the problems of society in sustainable and greener way.
- CO5. Understand and apply basic concepts of spectroscopy and electro-analytical technique in characterizing chemical compounds.

Module No.	Unit No.	Details	Hrs.	CO
1	Water		10	CO1
	1.1	Introduction, Types of Hardness, Disadvantages of hardness Equivalence of CaCO <sub>3</sub> , Experimental determination of hardness.	10	201
	1.2	Softening of Hard water: Lime soda method Zeolite method, Ion Exchange process, Desalination of brackish water using Electro dialysis, Reverse osmosis		
	1.3	Methods to determine extent of water pollution, BOD, COD, Treatment of industrial wastewater.		
2	Polyme	r Chemistry	9	CO2
	2.1	Introduction, Classifications, Characteristic properties, Concept of molecular mass, determination of molecular mass, Glass transition temperature Tg		
	2.2	Methods of polymerization, Compounding and fabrication of plastics, Structure and property relationship of polymer		
	2.3	Synthesis, properties and Application of few commercially important polymers, Conducting polymer, Liquid crystal Polymer		
3	Energy		10	CO2
	3.1	Introduction, Classification, Renewable energy, production of electricity using solar energy, Photo voltaic cells, Fuel cell		
	3.2	Fuel: Definition, characteristic of good fuel, Calorific value of fuel, Solid fuel, Analysis of coal and its significance, Liquid fuel, refining of petroleum, cracking, characteristic of fuel for internal combustion engine (Knocking, anti-knocking agents, octane number, cetane number, unleaded petrol)		
	3.3	Waste to energy conversion: Solid waste and its classification, need of energy production from waste, method of conversion of energy from solid waste		
4	Green (	Chemistry and Nanotechnology	7	CO4
	4.1	Green Chemistry: Introduction, Goals, 12 principles of green chemistry, Significance of 12 principles with industrial examples, Green synthesis of few important materials		
	4.2	Nanomaterial and Nanotechnology: Introduction, properties and synthesis of nanomaterial, Properties and applications of special nanomaterial structure carbon Clusters		
5	Spectro	scopy and Instrumental methods of Analysis	9	CO5
	5.1	UV spectroscopy, Principle, Instrumentation and applications		
	5.2	IR spectroscopy, Basic Principle, Instrumentation and applications		
	5.3	1H NMR Spectroscopy: Principle, Instrumentation, Chemical Shift, Factors affecting chemical shift, Applications.		
	5.4	Electroanalytical techniques, pH metry, Conductometry, Potentiometry

#### **Course prerequisites**

- Basics of units and conversions
- Basics of Trigonometry
- Newton's Laws of Motion

#### **Course Objectives**

Engineering mechanics is the application of physics to solve problems involving common engineering elements. This course introduces system of forces and its effect on stationary and moving objects. The goal of this course is to expose students to problems in real-world scenarios and respond accordingly.

#### **Course Outcomes**

#### At the end of successful completion of the course the student will be able to

- CO1. Evaluate resultant and moment of a force system
- CO2. Analyze the concept of kinematics of particle and rigid body.
- CO3. Determine center of gravity of wires (rods), lamina and solids
- CO4. Analyze applications of equilibrium using free body diagram
- CO5. Analyze the dynamic system using D'Alembert, work energy and impulse momentum principle.

Module	Unit	Details	Hrs.	CO
No.	No.			
1	-	n of forces	7	CO 1
	1.1	System of coplanar forces: Resultant of concurrent forces,		
		parallel forces, non-concurrent non parallel system of		
		forces, moment of force about a point, couples,		
		Varignon's theorem, Principle of transmissibility of forces		
	1.2	Resultant of forces in space		
2		natics of Particles and Rigid Bodies	11	CO 2
	2.1	Variable motion, motion curves (a-t, v-t, s-t) (acceleration		
		curves restricted to linear acceleration only), motion along		
		plane curved path, velocity & acceleration in terms of		
		rectangular components, tangential & normal component		
		of acceleration, relative velocities.		
	2.2	Introduction to general plane motion, problems based on		
		ICR method for general plane motion of bodies (up to 2		
		linkage mechanism and no relative velocity method)		
3	Centr	oid of Wires, Laminas and Solids	5	CO 3
	3.1	Centroid of wires/rods		
		Centroid of plane laminas: Plane lamina consisting of		
		primitive geometrical shapes		
		Center of gravity of solids: Solids consisting of primitive		
		solids		
4		brium of Force System and Friction	13	CO 4
	4.1	Equilibrium of system of coplanar forces: Condition of		
		equilibrium for concurrent forces, parallel forces and non-		
		concurrent, non-parallel force system (general force		
		system), Free body diagram.		
	4.2	Types of support, loads, beams, determination of reactions		
		at supports for various types of loads on beams (excluding		
		internal hinge problems)		
	4.3	Laws of friction, cone of friction, angle of repose,		
		equilibrium of bodies on inclined plane, application to		
		problems involving wedges and ladders		
5		ics of particle	9	CO5
	5.1	Force and acceleration: Introduction to basic concepts,		
		equations of dynamic equilibrium, Newton's second law		
		of motion (only rectilinear motion)		
	5.2	Work energy principle		
	5.3	Impulse and Momentum: Principle of linear impulse and		
	2.0	momentum, law of conservation of momentum, impact		
		and collision, direct central and oblique central impact.		
	<u> </u>	Total	45

<sup>\*</sup> Batch wise Tutorial

#### **Course prerequisites**

- Knowledge of various geometric constructions.
- Basics of trigonometry

#### **Course Objectives**

The students will be able to

- 1. Familiarize with the conventions and standards along with the principles of projections applied to lines and points.
- 2. Apply the principles of orthographic projections to draw elevation, plan, End view, Isometric views etc.
- 3. Apply the principles of orthographic projections to draw various views of regular solid objects.
- 4. Apply the fundamentals of solid geometry and develop lateral surfaces of solids

#### **Course Outcomes**

### At the end of successful completion of the course the student will be able to visualize and draw

- CO1. Projection of lines and planes
- CO2. Orthographic and sectional views of any 3D object.
- CO3. Isometric drawing.
- CO4. Projection of regular solids
- CO5. Section and lateral development of regular solids

Module	Unit	Details	Hrs.	CO			
No.	No.						
1	Projec	04	CO 1				
	1.1	Dimensioning, Scales, Drawing Pencils etc.					
		Dimensioning, Scales, Drawing Pencils etc.					
	1.2	Projection of points, Projection of lines inclined to both					
		the reference planes.					
	1.3	Projection of Planes: Triangular, Square, Rectangular,					
		Pentagonal, Hexagonal and circular planes inclined to					
		one reference plane and perpendicular to other.					
2	Ortho	graphic Projection	03	CO 2			
	2.1	Orthographic projections of simple machine parts by first					
		angle method as recommended by Indian standards,					
		Sectional views of simple machine parts (full section).					
3	Isome	tric View	02	CO 3			
	3.1	Introduction to Isometric drawing and construction of					
		isometric drawing of machine parts					
		Students have to prepare a Simple 3D model with at least f	ive com	ponents			
using Soli			ı	1			
4	Projec	ction of Solids	03	CO 4			
	4.1	Introduction to Projection of Solids, Classification of					
		Solids and Projection of right regular solids (prism,					
		pyramid, cylinder, and cone) inclined to both reference					
		planes (excluding spheres, hollow and composite solids)					
5	Sectio	n and Development of Solids	03	CO5			
	5.1	Projection of sectional views for solids (prism, pyramid,					
		cylinder, and cone) cut by plane perpendicular to one and					
		inclined to other reference planes (excluding curved					
		cutting planes).					
	5.2	Lateral surface development of prism, pyramid, cylinder,					
		cone with section plane inclined to one reference plane					
		only. (excluding reverse development)					
		Total	15

#### **Course prerequisites**

Knowledge of Basic Electrical parameters: Resistance, Inductance, Capacitance, Frequency, Voltage, Current and Power and Energy, basic laws of magnetism

#### **Course Objectives**

It is difficult to imagine life without electricity and electronics. Electricity plays a major role in the working of all minor and major devices used in our day to day life. In this course students acquire fundamental knowledge to understand the design of electrical and electronics systems.

#### **Course Outcomes**

#### At the end of successful completion of the course the student will be able to

- CO1. Analyze resistive networks excited by DC sources using various network theorems
- CO2. Explain rectifier-filter circuits using PN junction diode and working of Bi-polar junction and field effect transistor.
- CO3. Demonstrate and analyze steady state response of single phase and three phase circuits.
- CO4. Understand principles and working of AC and DC machines with their applications.
- CO5. Understand operational amplifier and its applications

Module	Unit	Details	Hrs.	CO
No.	No.			
1	DC cir		10	CO 1
	1.1	Concept of dependent and independent sources, ideal and		
		practical voltage and current sources, Kirchhoff's Laws,		
	1.0	source transformation and network terminology.		
	1.2	Resistive network simplification, Series, parallel		
	1.2	connection and Star-Delta transformations		
	1.3	Mesh and nodal analysis, concept of super mesh and super ode (Analysis only with independent sources)		
	1 1			
	1.4	Superposition theorem, Thevenin's theorem, Norton's		
		theorem, Maximum power transfer theorem (Analysis only with independent sources )		
2	Rosic	Electronic devices and their applications	08	CO2
		<u> </u>	UO	COZ
	2.1	<b>P-N Junction diode:</b> Construction and working of PN		
		junction diode, current voltage characteristics.		
		Zener Diode: Construction and working, current voltage		
		characteristics. Zener diode as voltage regulator. <b>Rectifiers:</b> Half wave rectifiers with resistive load, full		
		wave center tap and bridge rectifier with resistive load		
		with their parameters such as ripple factor, rectification		
		efficiency, transformer utilization factor. Filter circuits		
	2.2	<b>Bipolar Junction Transistor:</b> BJT operation, CE, CB and		
		CC configuration of BJT, BJT as a switch, BJT as a current		
		amplifier and voltage amplifier.		
		(No derivations and Numerical)		
	2.3	Field effect transistor: FET operation, Configuration of		
		FET, Output and transfer characteristics, Common source		
		FET amplifier, Comparison between BJT and FET		
		(No derivations and Numerical)		
	#Self-s	study topics		
	Comp	onents of LT Switchgear: Switch Fuse Unit (SFU), MCB,		
	_	, MCCB, Types of Wires and Cables, Earthing.		
		of Batteries, Important Characteristics for Batteries.		
		ntary calculations for energy consumption, power factor		
		vement and battery backup.		
	_	- fluorescent, CFL, LED.		
		al measuring instruments principle and applications-		
3	AC cir	meter, megger, tong tester.	12	CO 3
3			12	CO 3
	2.1	Generation of alternating voltage, average value, RMS value, form factor, crest factor, phasor representation in		
		rectangular and polar form.		
	2.2	Steady state behavior of single phase AC circuits with		
		pure R, L, and C, concept of inductive and capacitive		
		reactance, phasor diagram of impedance, phase		
		relationship in voltage and current.		

	2.3	RL, RC and RLC series and parallel circuits, concept of		
		impedance and admittance, power triangle, power factor,		
		active, reactive and apparent power, concept of power		
		factor improvement.		
	2.4	Series and parallel resonance, Q-factor and bandwidth		
	2.5	Three-phase balanced circuits, voltage and current		
		relations in star and delta connections.		
	2.6	Measurement of power in 3-phase system using two		
		wattmeter method		
4	Electri	cal Machines	12	CO4
	4.1	Single phase transformer construction and principle of		
		working, emf equation of a transformer, losses in		
		transformer, equivalent circuit of Ideal and practical		
		transformer, voltage regulation and efficiency of		
		transformer, phasor diagram at various loading condition		
		(no numerical expected)		
	4.2	Construction and working principle of DC motors such as		
		series, shunt and compound, torque-speed characteristics,		
		selection criteria and applications (no derivations and		
		numerical expected)		
	4.3	Three phase induction motor: Construction, working		
		principle, Generation of rotating magnetic field,		
		applications. (no derivations and numerical expected)		
	4.4	Single phase induction motor: Construction, working		
		principle, double field revolving theory, split phase,		
		capacitor start and shaded pole motor. applications (no		
		derivations and numerical expected)		
5	Opera	tional Amplifier	03	CO5
	5.1	Operational amplifier, block diagram, characteristics of		
		IDEAL opamp, open loop configuration, opamp as		
		comparator		
	5.2	Closed loop configuration applications: opamp as an		
		inverting and noninverting amplifier, opamp adder and		
		subtractor.

#### Course prerequisites

- Higher secondary level Mathematics
- Applied Mathematics- II

#### **Course Objectives**

- 1. Impart the knowledge of solving ordinary differential equations
- 2. Impart the knowledge of Multiple Integral
- 3. Impart the knowledge of Improper Integral
- 4. To expand a real function as Taylor's series and finding successive derivatives of functions

#### Course Outcomes

#### At the end of successful completion of the course the student will be able to

CO1. Identify and solve different types of ordinary differential equations using various

CO2. Solve problems involving Successive derivatives of real variable functions. Expand a function as an infinite series using Taylor's and Maclaurin's series and use it to solve problems involving indeterminate forms.

- CO3. Apply concept of Beta Gamma function and DUIS to solve improper integrals
- CO4. Find length of a curve using Cartesian, Polar and Parametric equations of curves
- CO5. Evaluate multiple integrals and use it to find Area, Volume and Mass of Lamina.

Downloaded by Sahil Biswas (sahilbiswas829@gmail.com)

Module No.	Unit No.	Details	Hrs.	CO
1		ential Equation of First Order and First Degree	13	CO 1
	1.1	Differential Equation of first order and first degree- Exact differential equations, Equations reducible to exact equations by integrating factors.		
	1.2	Linear differential equations (Review), Equation reducible to linear form. Applications of Differential Equation of first order and first degree		
	1.3	Linear Differential Equation with constant coefficients: Complimentary function, particular integrals of differential equation of the type $f(D)y=X$ , where X is $e^{ax}$ , $\sin(ax + b)$ , $\cos(ax + b)$ , $x^n$ , $e^{ax}V$		
	1.4	Cauchy's homogeneous linear differential equation		
	1.5	Method of variation of parameters  # Self-learning topic: Bernoulli's equation. Equation reducible to Bernoulli's equation.		
2	Succe	ssive Differentiation, Expansion Of Functions,		
_		erminate Forms	5	CO 2
	2.1	Successive differentiation: nth derivative of standard functions. Leibnitz's Theorem (without proof) and problems.		
	2.2	Taylor's Theorem (only statement) and Taylor's series, Maclaurin's series(only Statement) Expansion of $e^x$ , sinx, cosx, tanx		
		#Self-learning topic: Expansion of $sinh(x)$ , $cosh(x)$ , $tanh(x)$ , $log(1 + x)$ , Indeterminate forms, L'Hospital Rule, problems involving series

<sup>\*</sup> Includes continuous assessment of Term work of 25 marks and practical and Oral of 50 marks based on Laboratory work

#### **Course prerequisites**

Basic knowledge of computer peripheral devices, software concepts

#### **Course Objectives**

The course aims at a systematic approach to build logic for problem solving using tools like algorithm and flowchart. The concepts of Structured Programming Approach are introduced with C as Programming Language. This first course in programming enables students to develop domain specific software based solutions.

#### **Course Outcomes**

- CO1. Formulate a problem statement and develop the logic (algorithm/flowchart) for its solution.
- CO2. Apply basic concepts of C programming for problem solving.
- CO3. Illustrate the use of derived and structured datatypes such as arrays, strings, structures and unions.
- CO4. Design modular programs using functions and demonstrate the concept of pointers and file handling

Module	Unit	Details	Hrs. (Tutorial	CO
No.	No.		and Lab)	
1		duction to C	T	1
	1.1	Problem solving skill development: Problem Definition, fundamentals of algorithms and flowcharts, Algorithms and flowchart development	04	CO1
	1.2	Structure of C program and its Elements: Character Set, C Tokens, Keywords and Identifiers, Literals, Variables, Data Types and its qualifiers, Declaration and Initialization of Variables, Local and Global Variables, Declaring Constants, Formatted Input/output functions and unformatted input/output functions	04	CO2
2	Opera	ators and Expressions		
	2.1	Types of Operators: Introduction, Arithmetic Operators, Relational Operators, Logical Operators, Assignment Operators, Increment and Decrement Operators, Conditional Operator, Bitwise Operators	04	CO2
	2.2	Type Conversions: Implicit and Explicit, Special Operators- Comma Operator, sizeof Operator, dereferencing operator, Expressions and Evaluation of Expressions, Operator Precedence and Associativity	04	CO2
3	Contr	ol Structures		
	3.1	<b>Decision Making and Branching Control Structures:</b> if Statement, Multiple, Statements within if, if – else Statement, Nested if – else, else if Ladder, Decision making using Switch-Case	04	CO2
	3.2	Looping Control Structures: While Loop, For Loop, Do While Loop, Algorithm and Flowchart for all the loops	06	CO2
	3.3	Jump Statements: Break and Continue, goto Statement	02	CO2
	3.4	Algorithm and Flowchart: Algorithm and Flowchart for if, if-else, else if ladder, switch case, for loop, while loop and do-while loop	02	CO1
4	Array	s, Structures And Unions		•
	4.1	<b>Arrays:</b> Introduction to One Dimensional Arrays, Multidimensional Arrays, Declaration and Initialization of Arrays, Reading and Displaying arrays	04	<b>CO3</b>
	4.2	Character Arrays and Strings: Introduction, Declaring and Initializing String Variables, Reading Character and Writing Character, Reading and Writing Strings, String Handling Functions	04	CO3
	4.3	Structures and Unions: Introduction, Declaring and defining Structure, Structure Initialization, Accessing and Displaying Structure Members, Array of Structures, Introduction to Unions, Structure Vs Unions	04	CO3
5	User l	Defined Functions, Pointers and File Handling Operation	ons	
	5.1	User Defined Functions: Need, Function Declaration and Definition, Return Values, Function Calls, Passing Arguments to a Function by Value, Recursive functions, Storage classes of Variables, Command Line Arguments	06	CO4

SVU 2020 - R1.0

F Y B Tech (Common to All) AC 02/05/2020

Page **33** of **60** 

5.2	Introduction to pointers: Pointer declaration and initialization, Pointer addition and subtraction, Evaluating pointer expressions  Pointers and Functions: Pass by Reference, Returning pointers from functions  Dynamic Memory Allocation using Pointers:	08	CO4
	Dynamic memory allocation using malloc(), calloc() and realloc() and deallocation of memory using free()		
5.3	<b>File Handling Operations:</b> Defining and Opening a file, closing files, file modes, input/output operations on files	04	CO4
·	Total	60

# **Course prerequisites**

Basic knowledge of environmental studies up to higher secondary

# **Course Objective**

The objective of this course is to sensitize the students towards environment along with emphasis on engineering applications required for environmental preservation. Learner will get acquainted with various environmental assessments and monitoring tools for addressing environmental concerns.

Experiential learning through projects will enable them to relate with real world problems. It will also develop an approach to analyze and think critically.

#### **Course Outcomes**

At the end of successful completion of the course the student will be able to

- CO 1. Understand need and concept of sustainability associated with developmental activities
- CO 2. Get familiar with various renewable energy resources and technologies to harness the same
- CO 3. Get acquainted with various pollution control and energy conversion technologies
- CO 4. Recognize various tools for environmental assessment and monitoring
- CO 5. Realize the role of technology for the environmental conservation

# Course prerequisites

None

#### **Course Objectives**

The objective of the course is to introduce activity based learning to solve real world problems with engineering solution.

#### **Course Outcomes**

# At the end of successful completion of the course the student will be able to

- CO1. Analyse a real world situation to convert it into engineering design statement
- CO2. Adopt multidisciplinary approach for designing solution to the problem.
- CO3. Use the engineering design process to build a product using simple mechanisms, controllers and software development approach.
- CO4. Execute the project ethically in the project management paradigm.

# **Course Project:**

A multidisciplinary team will develop a product from the given need statement during the semester. Prototype building using 3D modelling and printing can be learnt. This project will be reviewed at various stages.

## **Course prerequisites**

- Basics of biological systems
- Basics of Engineering mechanics

# **Course Outcomes:**

Biology for Engineers is an interdisciplinary course designed for the students of various engineering streams to appreciate the link between biological Science and engineering.

#### At the end of the course a student will be able to

- CO1: Understand cell structure and its function at the molecular level.
- CO2: Understand the computational biology and human genome data
- CO3: Apply the knowledge of biomechanics to determine the forces in the muscles, prediction of blood flows, etc.
- CO4: Select the appropriate material for medical device or implants by considering its biocompability

Module	Unit	Details	Hrs.	CO
No.	No.			
1	Basic	Cell Biology	04	CO1
	1.1	Introduction, Origin of life, Evolution		
	1.2	Basic definition of a cell, prokaryotic cell, eukaryotic cell,		
		cell cycle and cell division, m-phase, meiosis, cell		
		differentiation		
2	Biome	olecules and Enzymes	06	CO1

# Course prerequisites

Knowledge of programming languages.

#### **Course Objectives**

The objective of the course is to impart knowledge of python programming. The course mainly introduces basic in python programming language concepts like data structures, Decision Making statements and Functions. Further the course also covers Object Oriented Programming concepts and Files Handling in Python.

# **Course Outcomes**

At the end of successful completion of the course the student will be able to

CO1: Use basic data structures in Python

CO2: Use different Decision Making statements and Functions in Python.

CO3: Apply Object oriented programming concepts in Python

CO4: Implement different File handling operations

# Course prerequisites

Following topics of higher secondary level English are required as prerequisites of this course:

- Grammar of English Language
- Reading and Listening Comprehension
- Letter Writing

#### **Course Objectives**

The focus of this course is to improve linguistics and soft skills. The modules on phonology and functional grammar will enhance students' proficiency in English. Students' interpersonal skills and non-verbal communication are developed through oral activities such as role-plays public speeches, impromptu presentations and group discussions.

#### **Course Outcomes**

# At the end of successful completion of the course the student will be able to

- CO1. Use advanced vocabulary and grammar for effective communication.
- CO2. Compose business letters, technical documents and e-communication messages.
- CO3. Articulate sentences correctly by using stress pattern, intonation and voice modulation.
- CO4. Use basic communication and behavioral skills in day-to-day communication.
- CO5. Communicate effectively as an individual and a team-member.

#### **Course prerequisites**

Nil

#### **Course Objectives:**

Workshop is an important part of any engineering industry. Engineering students should be conversant with different operations performed on materials for producing desired objects, of various shapes/ sizes, made using several tools and devices. Experiential learning in this course develops skills in different trades of manufacturing.

#### **Course Outcomes**

At the end of successful completion of the course the student will be able to

- CO1. Build an object using Fitting trade as per given specifications.
- CO2. Develop an object using carpentry trade as per given specifications.
- CO3. Understand the use of Lathe machine for shaping objects by removal of metal.
- CO4. Comprehend the process of PCB making, layout of house wiring, and electric arc welding.

Module	Unit	Details	Hrs.	CO
No. 1	No. Fitting	shon	06	CO1
1	1.1	Introduction to Fitting shop. Demonstration of	00	COI
	111	measuring instruments, cutting tools etc. used in		
		Fitting shop.		
	1.2	One simple job involving filing, right angle making,		
	1.2	and cutting to size operations.		
2	Carnan	try shop	04	CO 2
L	2.1	Introduction to carpentry shop. Demonstration of	04	CO 2
	2.1	measuring instruments, cutting tools used in		
		Carpentry shop. Planning a job using Jack plane.		
	2.2	One simple job consisting of lap joint to be performed		
	2.2			
2	N/ 1:	in a group consisting of Two students.	0.4	60.2
3	3.1	e shop (Demonstration)  Introduction of all machines available in machine	04	CO 3
	3.1			
		shop. Demonstration of assembling and disassembling		
		tools.		
	3.2	One demonstration job on lathe machine involving		
1	Woldin	turning, facing, grooving, threading etc. operations	0.4	CO 4
4	Welding 4.1	Introduction to Welding shop. Demonstration of	04	CO 4
	4.1	welding tools and equipment, are welding practice.		
	42	One simple job involving Lap, Butt, Vertical joint to		
	2	be performed in a group consisting of Four students.		
5	Electric	al Wiring shop	04	CO4
	5.1	Introduction to Electrical wiring. Demonstration of		
		Electrician tools like Tester, pliers, screw driver,		
		multimeter, etc.		
	5.2	Hands on experience on House wiring or staircase		
		wiring or godown wiring. Exposure to connecting		
		solar panel with battery and tube light.		
6		Circuit Board (PCB) shop	04	CO4
	6.1	Introduction to PCB shop. Demonstration of tools,		
		material used for PCB making.		
	6.2	Demonstration of PCB making.		
		Total	26

Course prerequisites: Workshop-I

#### **Course Objectives**

Workshop is an important part of any engineering industry. Engineering students should be conversant with different operations performed on materials for producing desired objects, of various shapes/ sizes, made using several tools and devices. Experiential learning in this course develops skills in different trades of manufacturing.

#### **Course Outcomes**

At the end of successful completion of the course the student will be able to

- CO1. Build an object/product using Fitting trade as per given specifications.
- CO2. Develop an object/product using carpentry trade as per given specifications.
- CO3. Create an object/product using Welding trade as per given specifications.
- CO4. Prepare an object/product using PCB trade as per given specifications.

Based on the skills acquired by students in semester I, they will choose any Two trades from Fitting, Carpentry, welding and PCB. With the help of these skills they will make product or job in respective trade. Following is the list if some sample products which can be selected but not limited. Apart from products listed below they can choose any product.

A team of students consisting of 4 to 5 members from same batch will have to select two trades from Fitting, carpentry, welding and PCB,. Each team will get 15 hours to complete one trade. Assessment will be

- 1. Continuous assessment
- 2. Quality of finished product

Module	Unit	Details	Hrs.	CO
No.	No. Fitting	shon	15	CO 1
1	1.1	Proposed products for Fitting shop:	13	COI
	1.1	1. Machine clamp assembly		
		2. C shape clamp		
		3. Fitting shop jobs involving various shapes and		
		operations		
		4. Any other product involving fitting operations		
		Timy other product involving fitting operations		
2		ntry shop	15	CO 2
	2.1	Proposed products for carpentry shop:		
		1. Office Tray		
		2. Switch board		
		3. Wooden stool		
		4. Mail box		
		5. Chalk box and duster		
		6. Picture frame		
		7. Chair cum ladder		
		8. Any other product involving carpentry		
		operations		
3	Weldin		15	CO 3
	3.1	Proposed products for Welding shop:		
		1. Magazine rack		
		2. Metal stool		
		3. Welding table		
		4. Cloth dryer stand		
		5. Ladder		
		6. Shoe rack		
		7. Flower pot stand		
		8. Any other product involving Welding		
		operations		
4	Printed	l Circuit Board (PCB)	15	CO 4
	4.1	December 1 and 1 a		
	4.1	Proposed products for PCB shop: 1. Digital Clock		
		2. Electric Lamp.		
		_		
		3. 3Digital thermometer		
		4. 12V Power Supply 5. Portable Speeker		
		5. Portable Speaker. 6. Transister Polarity Tester		
		6. Transistor Polarity Tester		
		7. Automatic Street Light.		
		8. LED Headlights		
		(Egal 7.6 software will be used)	20	
		Total	30	

In this project, work expected from student is

- 1. Prepare product drawing
- 2. Calculate material required
- 3. Calculate selling price of product considering raw material cost, labour cost, profit etc.
- 4. Process plan with manpower and approximate time required.
- 5. Complete the product in given time period
